

Environmental Statement

At BOXI, we feel strongly about protecting our environment and leaving the world a better place. That's why we work only with environmentally conscious partners.

BOXI cabinets are produced by our USA-based, **Kitchen Cabinet Manufacturers Association (KCMA)**-certified manufacturer. As a member of the KCMA Environmental Stewardship Program, BOXI strictly complies with high standards of air quality, sustainable material, low formaldehyde level, waste management, energy conservation, and community involvement.

01 BOXI cabinets are made of particleboard and MDF melamine compliant with Title VI of the Toxic Substances Control Act (TSCA).

02 We purchase Sustainable Forest Initiative (SFI)-certified materials for door and case construction components.

03 All cardboard waste is recycled and recycled cardboard materials are utilized for product wrapping.

04 All solid waste and dust generated in our manufacturer's facility is recycled.

05 We only purchase TSCA Title VI-certified panels made with ultralow-emitting formaldehyde-based resins or no added formaldehyde-based resins to produce our cabinets, reducing our customer's exposure to formaldehyde emissions.

06 BOXI Mushroom Shaker, Salt Shaker, Peppercorn Edge, Salt Slab, and Mushroom Slab cabinets have a 100% recycled PET skin, the equivalent of 25 water bottles. Ice Slab has a non-100% recycled PET skin.

07 Our partner illuminates their factory and offices with low-energy, high-efficiency lighting and maintains a healthy, clean work environment by utilizing an energy-efficient variable-speed dust collection system. Clean, heated air is returned to the factory in winter months, cutting down on energy usage.
