

ARP 6.5L P400 Rod Bolt Instructions

These rod bolts are ARP 2000 material and are ONLY compatible with P400 rods. Stock 6.5L rods do not have this style bolt.

Torque to 60 ft lb

Stretch is 6 to 7 thou

Per ARP, these bolts are damn strong and should be stretched to 6 thou but if you require more clamp load you could go as high as 7 thou; with ARP lube, not oil.

The double shank design lends itself to a little higher stretch for added clamp load. This is why their website generically says 5 thou for ARP 2000 but these can be higher.
